

Corn Nitrogen Management Demonstration

August 20, 2013

10 AM to 1 PM
Chenango County Road 2
and Leon Cumber Road
Greene, NY
(see directions below)

Given the wet summer there is a good chance you are now more than ever questioning how much and when nitrogen should be applied to corn. Bob and John Hofmann of Cheshire Valley Farm have been participating in a nitrogen management project for the past three years to look at how they might optimize the amount of nitrogen they apply to corn.

This year they applied 0, 50 and 100 lbs of N sidedressed per acre to a corn field and will actually measure grain yields and compare them to recommended N rates to determine what actually worked best in that field. Each nitrogen rate is applied in the field four times. A great demo to view!!!

Schedule

10 am	Registration, coffee and donuts, tour plots
10:30-Noon	Determining <u>your</u> optimum nitrogen rate for corn Dr. Quirine M. Ketterings, Associate Professor Nutrient Management Spear Program Cornell University
Noon—1PM	Lunch will be provided-registration is not required but would be helpful to prepare for lunch and handouts. Call CCE Herkimer County at (315) 866-7920 or email herkimer@cornell.edu

Directions

From Greene:

Take Rt 12 or 206 to Greene. Go approximately two miles west of Greene on Rt 206, turn right/north on to Chenango County Rd 2/North Geneganslet Rd. Go 1.2 miles north and turn right on to Leon Cumber Road.

From Whitney Point

Go 8 miles east of Whitney Point on Rt 206. Turn left/north on to Chenango County Rd 2/ North Geneganslet Rd. Go 1.2 miles north and turn right on to Leon Cumber Road.

Leon Cumber Road is a short gravel dead end road that ends at the corn field.
Follow the signs!!!
