

# Small Grains Meeting

Tuesday, February 18, 2014

11 AM to 2 PM

Tally-Ho Restaurant

State Route 20, Richfield Springs

## Agenda

### Malting Barley Roundtable

A Farm Brewery license is available to breweries when sufficient amounts of NY grown ingredients are used in making their beer. This legislation has created a demand for NY grown malting barley to meet the ingredient requirement for licensing. With the higher price malting barley can command comes a higher level of management and risk on the part of the grower. If you have been curious if this is a crop you should consider growing then join us.

### Identifying and Controlling Small Grain Diseases

Diseases can reduce yields and quality of small grains and Dr. Gary Bergstrom, Cornell University field crop plant pathologist joins us to discuss small grain diseases. The 2013 wheat and barley crops were severely affected by Fusarium head blight and we will be emphasizing that particular disease during the meeting. If you want to know more about small grain diseases and how to control them you won't want to miss this.

Registration including lunch will be \$15 pay at the door. To register call 315-866-7920 or email [herkimer@cornell.edu](mailto:herkimer@cornell.edu). Registration allows us to communicate any cancellations or changes in arrangements.
